# Agenda

- Azure Policy
- Azure Security Center
- How does it work together
- Summary

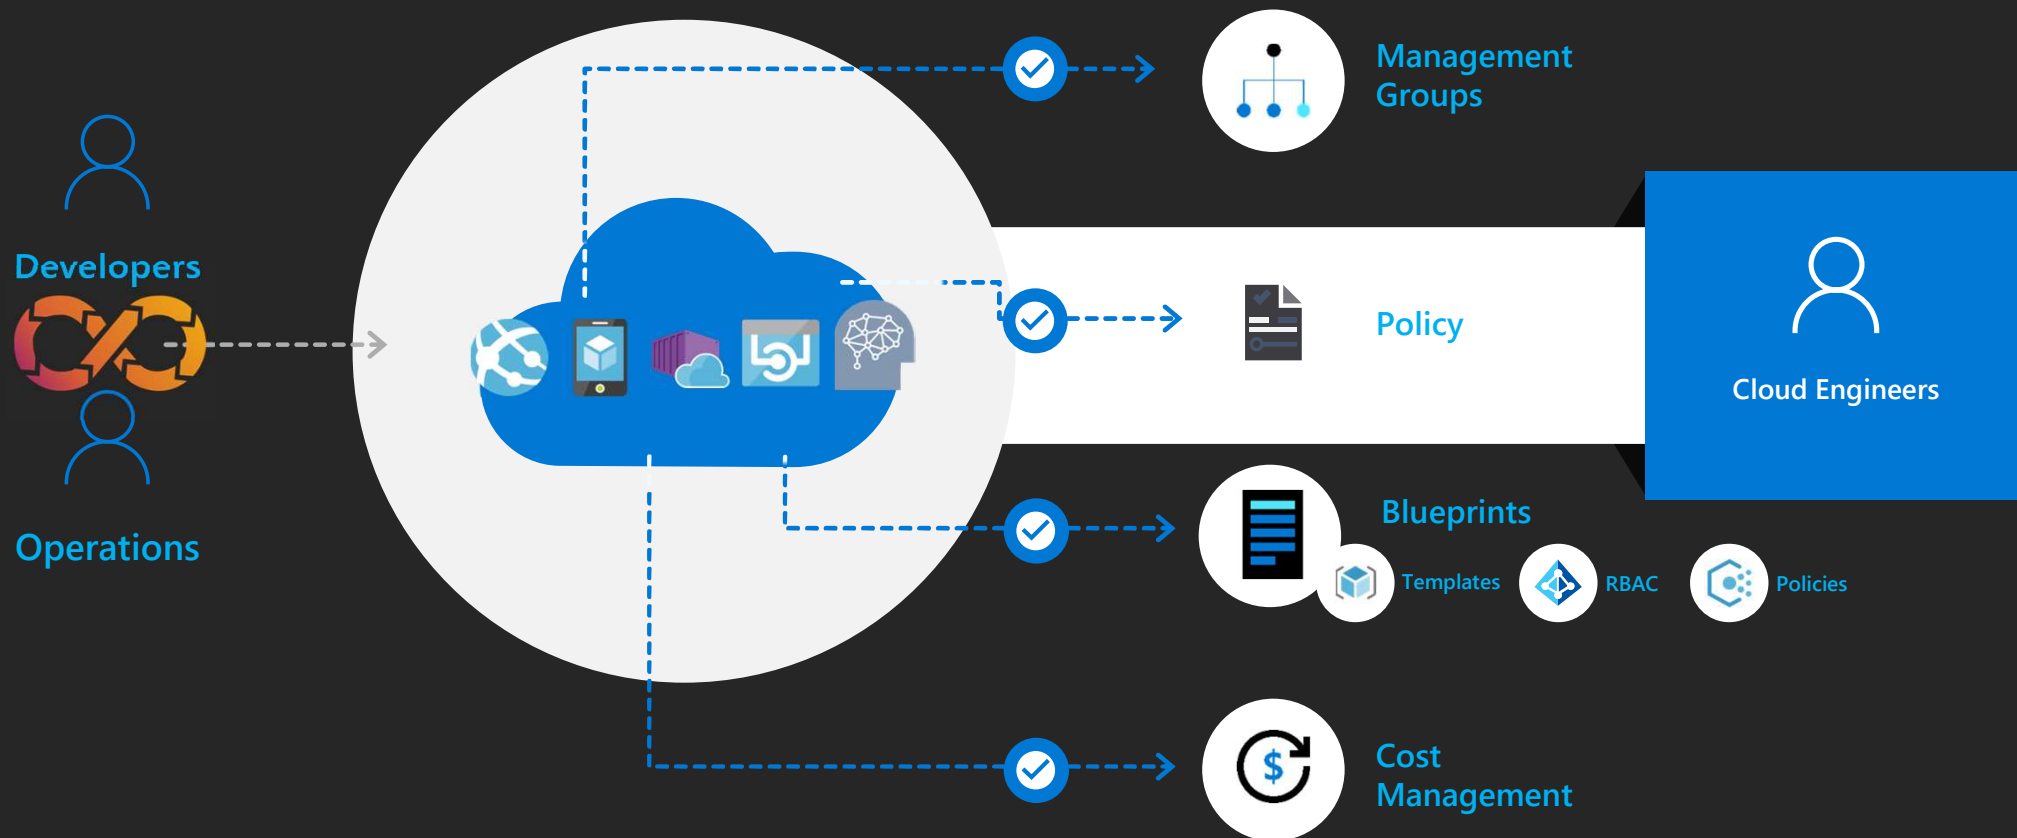

# Azure Governance

# Speed + Control

Cloud-native governance -> removing barriers to compliance and enabling velocity

# Azure Policy Concepts

- Create, assign and manage policies
- Enforce rules to ensure your resources are compliant
- Focus on resource properties for new and existing deployments
- A definition is a set of conditions in audit or deny mode
- An assignment is a policy definition placed on a specific scope
- An initiative is a collection of policies

# Azure Policy

- Turn on built-in policies or build custom ones for all resource types
- Real-time policy evaluation and enforcement
- Periodic & on-demand compliance evaluation
- VM In-Guest Policy (NEW)

## Enforcement & Compliance

- Apply policies to a Management Group with control across your entire organization
- Apply multiple policies and & aggregate policy states with policy initiative
- Exclusion Scope

## Apply policies at scale

- Real time remediation
- Remediation on existing resources (NEW)

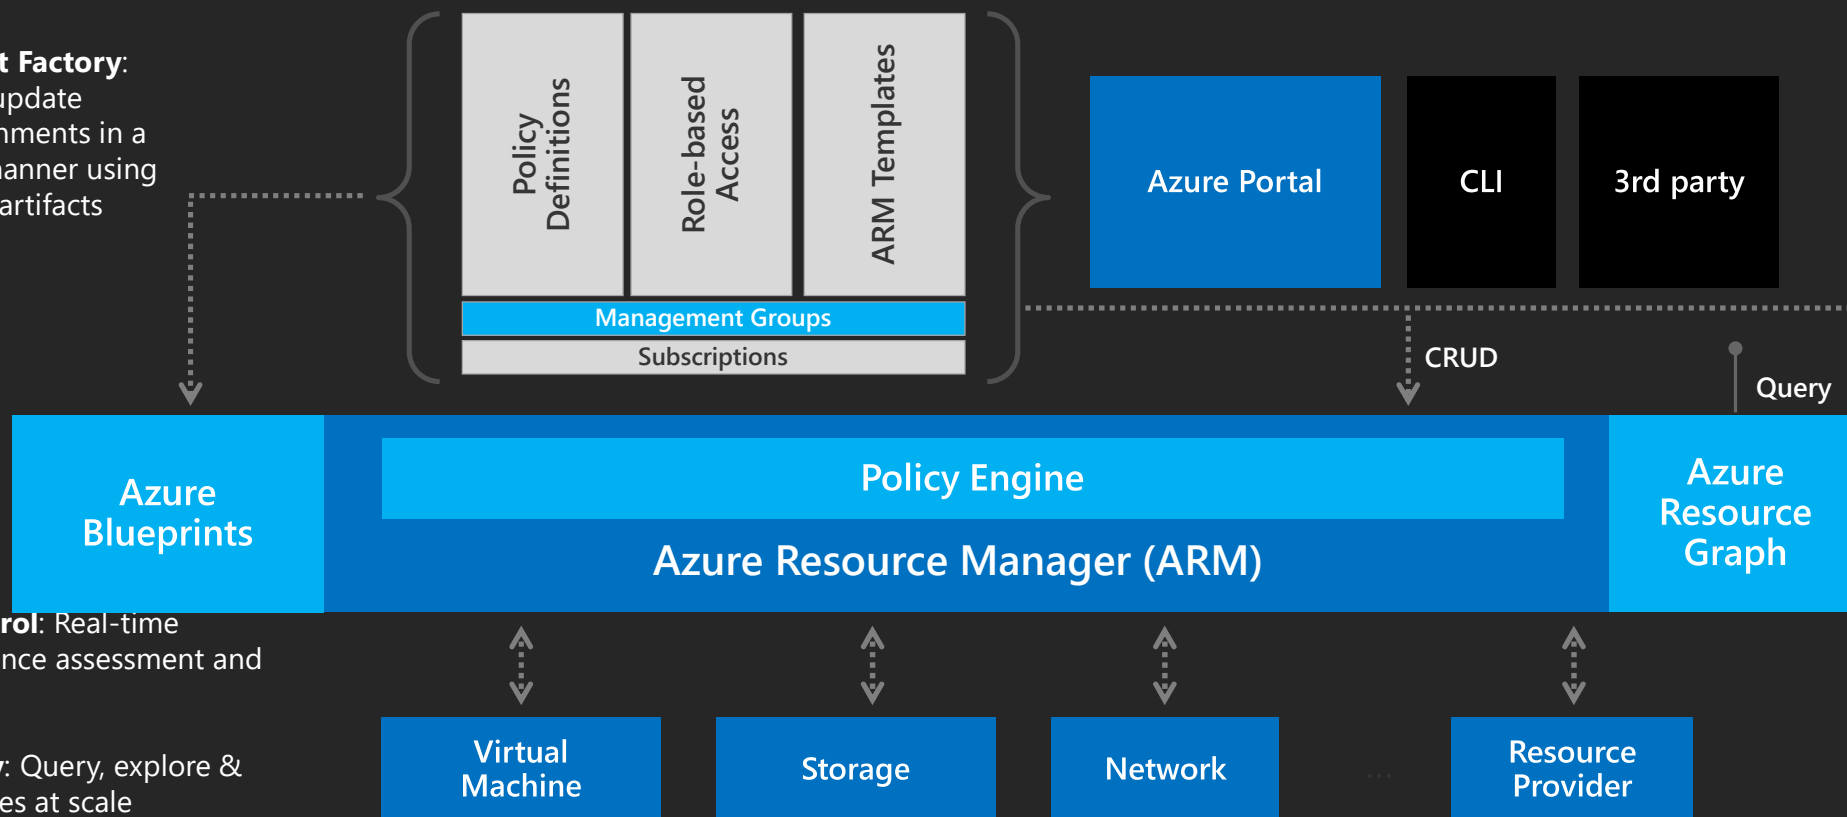

## Remediation

# Azure Governance Architecture

providing control over the cloud environment, without sacrificing developer agility

## 1. Environment Factory:

Deploy and update cloud environments in a repeatable manner using composable artifacts

**2. Policy-based Control:** Real-time enforcement, compliance assessment and remediation at scale

**3. Resource Visibility:** Query, explore & analyze cloud resources at scale

# Leverage built-in initiative & policies

## Security

Azure Security Center  
 Guest Config baselines  
 Key Vault certificate  
 NSG rules  
 AKS & AKS Engine  
 RBAC role assignment

## Regulatory Compliance

NIST SP 800-53 R4  
 ISO 27001:2013  
 CIS  
 PCI v3.2.1:2018  
 FedRAMP Moderate  
 Canada Federal PBMM  
 SWIFT CSP-CSCF v2020  
 UK Official and UK NHS  
 IRS 1075

## Tags

Require specified tag  
 Add or replace a tag  
 Inherit a tag from the RG  
 Append a tag

## Resource standardization

Allowed/ not allowed RP  
 Allowed locations  
 Naming convention  
 Back up VMs  
 Allowed images for AKS

## Cost

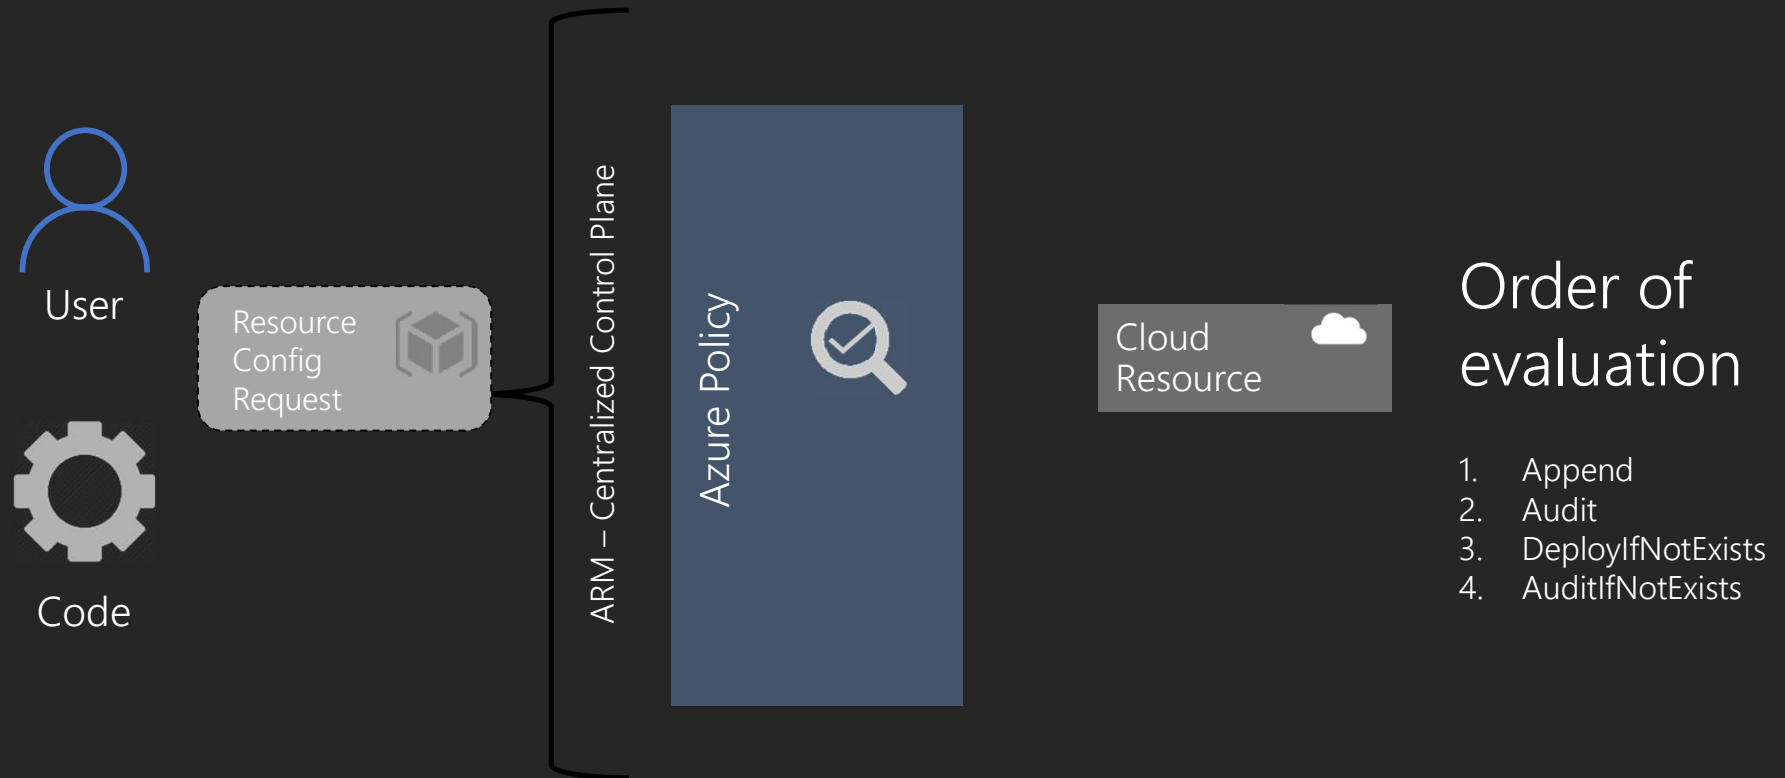

Allowed VM SKUs  
 Allowed Storage SKUs

# Azure Policy

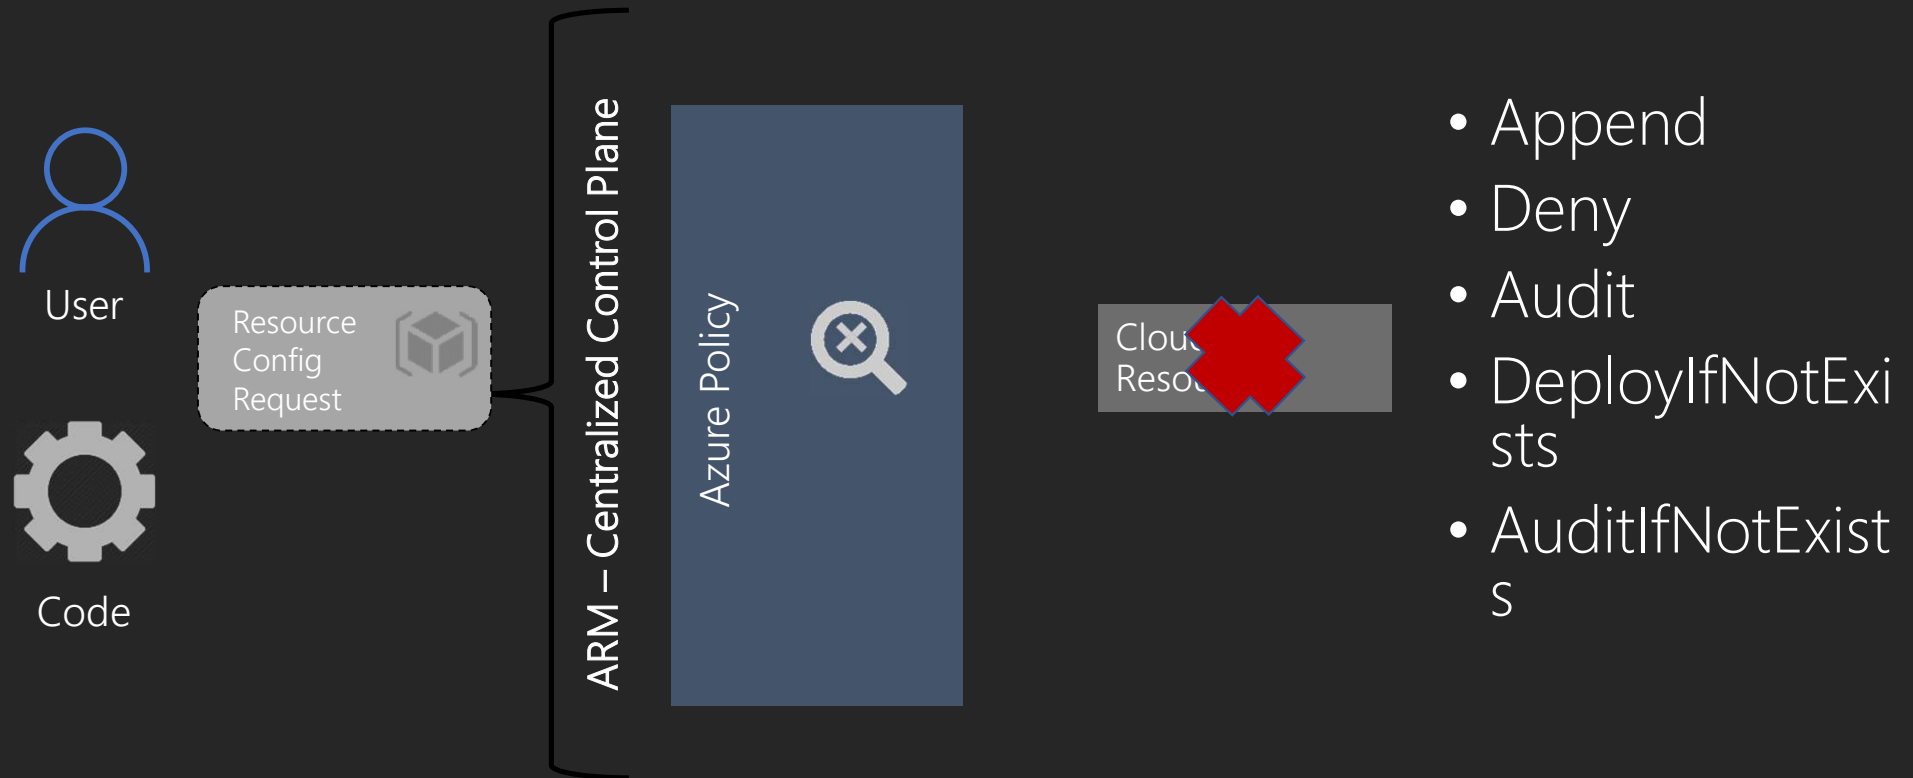

**DEMO**

# How does it work?

## How does it work?

# Azure Policy

# Azure Policy Definition structure

```
{  "properties": {
    "mode": "all",
    "parameters": {
      "allowedLocations": {
        "type": "array",
        "metadata": { "description": "The list of locations that can be specified when deploying resources",
          "strongType": "location",
          "displayName": "Allowed locations" }, "defaultValue": [ "westus2" ]
        } },
      "displayName": "Allowed locations",
      "description": "This policy enables you to restrict the locations your organization can specify when deploying resources.",
      "policyRule": {
        "if": {
          "not": {
            "field": "location", "in": "[parameters('allowedLocations')]"
          }
        },
        "then": { "effect": "deny" }
      }
    }
  }
```

# Policy

- 250 policy definitions per scope
- 100 policy set definitions per scope
- 1000 policy set definitions per tenant
- 100 policyDefinition references per policySetDefinition
- 100 policy assignments per scope
- 250 notScopes per policyAssignment
- <https://github.com/Azure/azure-policy>

# Azure Security Center

# Azure Security Center

- A service to strengthen your security posture
- Available in two Tiers – Basic and Standard
- Basic -> Free – Activated by default for all subscriptions
- Based on an security score – scope based
- Available for all workloads (Server, Container, SQL, IoT and more)

# Azure security center

## Strengthen security posture

### Cloud security posture management

Secure Score  
Policies and compliance

## Protect against threats

For  
servers

For cloud native  
workloads

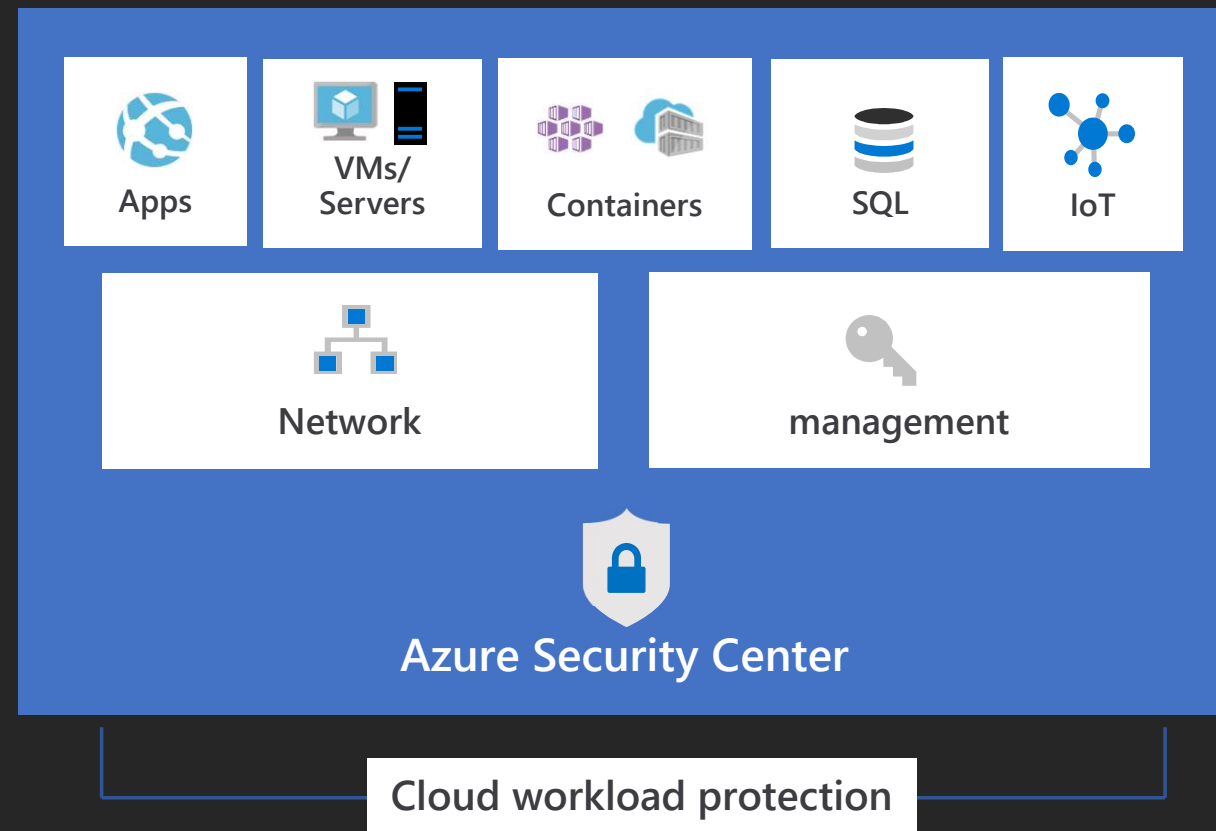

For  
databases  
and storage

Get secure faster

## Protect your workloads

- Detect & block advanced malware and threats for Linux and Windows Servers on any cloud
- Protect cloud-native services from threats
- Protect data services against malicious attacks
- Protect your Azure IoT solutions with near real time monitoring
- Service layer detections: Azure network layer and Azure management layer (ARM)

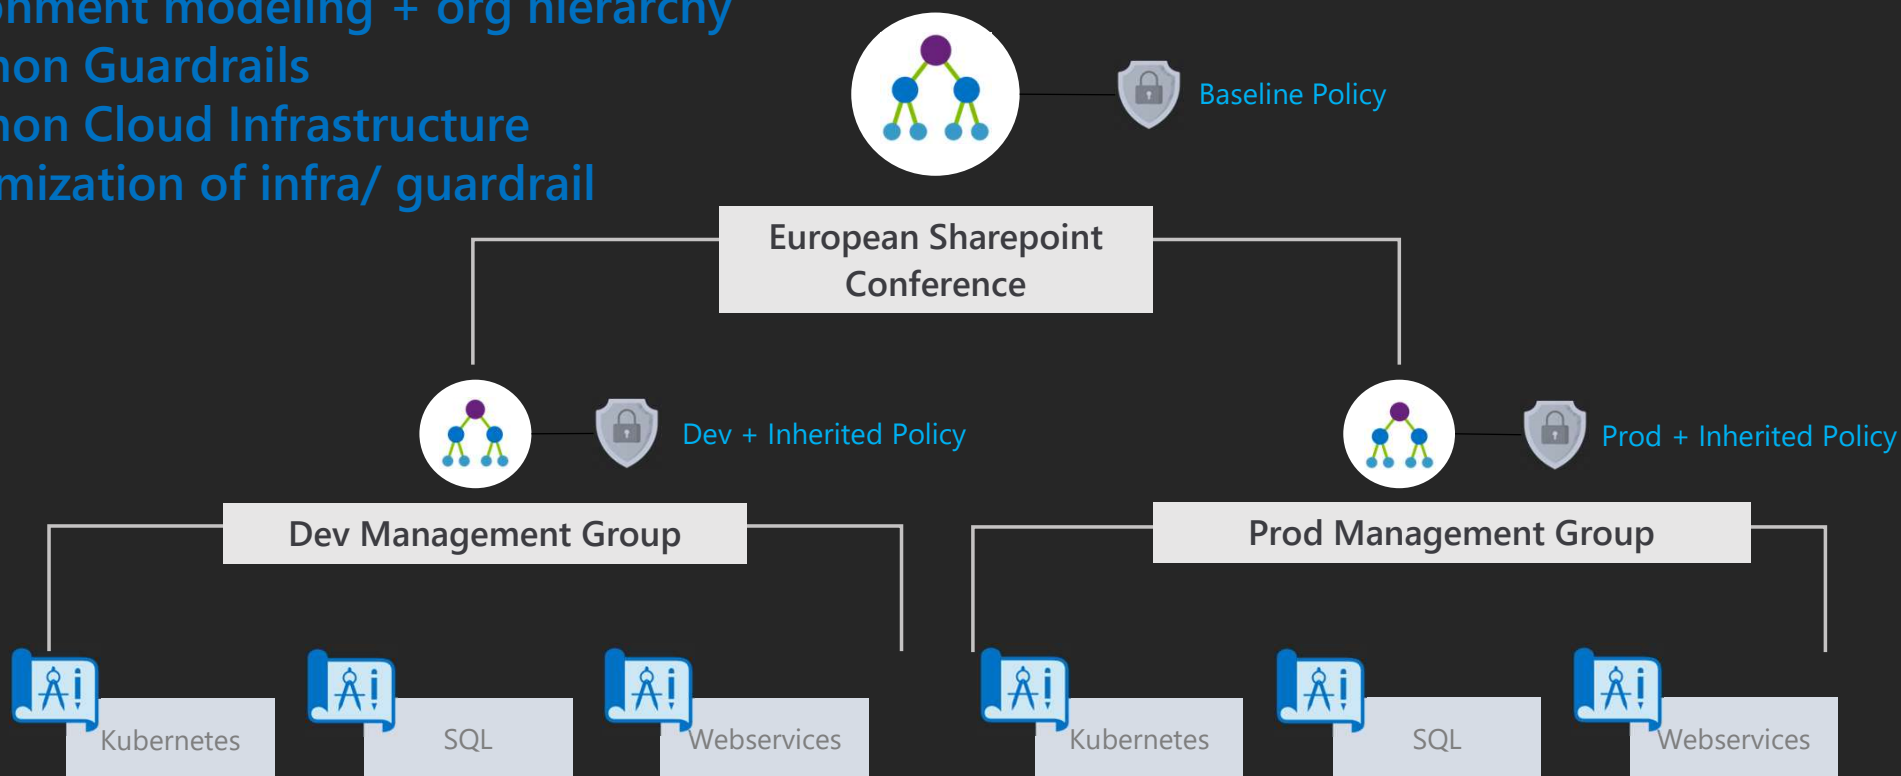

# Azure Security Center

**DEMO**

# Management Groups

Environment modeling + org hierarchy  
Common Guardrails  
Common Cloud Infrastructure  
Customization of infra/ guardrail

## How it works together

- All Azure Security Center recommendations based on Azure Policy
- Secure score is result of Azure Policy settings
- Recommendation is also a result of Azure Policy
- All Azure Policy are defined in Compliance mode
- You can define custom security policies for Secure score

# Azure Security Center

**DEMO**

## Azure Policy Recap

- Powerful solution to define Cloud Guards for own Tenant
- Start with an audit effect instead of a deny effect
- Define Management Groups to group subscriptions and set Policies at Higher level
- Use Deny effect for Production workloads with wisdom
- Creating initiatives even for single policy definition
- Integrate Azure Policy in your regular Azure check

# Azure Security Center

- Start with ASC to get a Security Overview
- Use ASC to strengthen your infrastructure
- Check the status in ASC regularly
- Create own security policies for secure score
